

IP PBX Network Telephone System

IP PBX (telephone system) and network telephone system to replace the traditional enterprise to communication telephone system based telephone system, which provides employees with extension number, so that the use of telephone conference and colleagues in the form of communication. All communication information is sent via a non-traditional telephone network in the form of a data packet. Using the Internet Phone Gateway, you can connect your existing phone line to your IP PBX and answer or make calls on your regular PSTN line.

IP PBXs function are excellent and breaking the regional restrictions, so some companies with multiple offices, especially those with overseas offices, are more suitable. For example: Hong Kong and
