FRONT DESK UNIT

Informative, Intelligent, Hotel-specific

The Front Desk Unit is a complete security management system.
It comprises of hotel-specific PC-based Uniqey Card Encoding Software and offers an appropriate interface with your own Property Management System.

Features include:

- ▢ the card record audit trail - who encoded which card and when
- ▢ one exclusive encoder for all Master Keys, Staff Keys and Guest Keys
- ▢ an optional printer for hard copies of Management Information
- ▢ the portable Programmer/Data Collector

The portable Programmer/Data Collector provides a lock programming facility, overrides locks in emergencies and collects data from the Audit Trail when required.

Optional and additional satellite key encoding stations enable Guest Room Key encoding at registration desks, to a maximum of fifteen per hotel.

The Front Desk Unit system provides integrated management information for the 'Universal Pro' range and the 'Premiere' range.

All this is backed up by a professional system support service, where our standards of technical and customer support are second to none and the enthusiasm and skill of our team means you can be assured of total satisfaction.

SYSTEM REQUIREMENTS FOR THE
UNIQEY FRONT DESK UNIT SOFTWARE

The system supplied by Uniqey Security Limited for the application of the **Uniqey Front Desk Unit** software has the following specification. Please be advised that a lower specification may cause the operation of the FDU to be seriously impaired or not work at all.

- Pentium II mini tower PC running at 233MHz minimum
- 32Mb RAM
- 1.44Mb FDD
- 1Gb HDD
- SVGA PCI Video Card
- Internal CD ROM
- 9-pin Serial Port (x2)
- Parallel Port (x1)
- 15" SVGA Colour Monitor
- PS2 Mouse
- Keyboard
- Windows 9x or higher - loaded

Due to Uniqey's continuous development of it's products, specifications are subject to change without prior notice.

The Front Desk Unit is supplied with a Master Card set.

Sophisticated, Flexible, Enduring

The 'Premiere' range is an alternative option to the 'on the door', single assembly, Electronic Guest Room Lock.

This innovative range is 'off the door' with all the electronics concealed separately, offering low profile and high security, designed with an eye to the future.

The beauty of this range is the flexibility and freedom of the design.

- mechanical and electronic modules can be positioned to suit the hotel
- does not interfere with the furnishings, fittings or design.
- customised variations can be engineered to order.

The Modular Guest Room Lock performs all the functionality of an 'on the door' lock in a highly secure and stylish package. You get a lot more than the eye can see, that's the beauty of this range.

- entire range of door handles, mortise dead bolts and dead-locking mortise latches can be used from any supplier
- it may be possible to retain existing fittings
- electronic controller controls access, tracks and lists all card usage times, dates, entries, exits, 'door left open periods' and more
- provides extensive information for audit trails.

The **Premiere 'Smartqey'** smart card option is another Industry first and once again we are leading the field with the development of state of the art technology. Beware of imitations, this is surely the model for the future and the ultimate, most desirable Guest Room Locking solution.

- proximity, or non-contact smart card technology replaces the traditional magnetic stripe reader and card
- data encoded for guest rooms and other facilities such as payment systems
- highly secure encrypted smart card encoding with multifunction application capabilities
- entry readers can be flush, surface mounted or tailored to your specific requirement
- an interior designers dream

THE 'UNIVERSAL PRO' RANGE

Sophisticated, Flexible, Enduring

Developed with twenty years application specific knowledge, the 'Universal Pro' range is a flexible, robust, custom-built solution for hotel wide security management, no matter how large or small.

The **'Uniqey'** itself is the essential component of the system, a magnetic stripe card that uniquely identifies each guest, resident or staff member.

Recognised as the best card readers for hotel guest room doorlocks, the 'Universal Pro' range provides cost-effective, complete security for your hotel and peace of mind for your guests and staff:

- protects hotel guest personnel and property
- protects hotel property and storage areas
- controls access precisely
- severely limits opportunities for crime
- enables you to establish security related facts
- enhances your business operation and reputation

The 'Universal Pro' door lock is an intelligent, stand alone **Guest Room and Conference Room lock.** Efficient and effective.

- battery powered with a typical four year expectancy
- stylish all-metal cast housing, available in a full range of colours and finishes
- controls access, tracks and lists all card usage times, dates, entries, exits, 'door left open periods' and more.
- data is retained in a long-term, real-time audit trail for future analysis
