

DETEC Hand-Held Metal Detector DH - 50A

The hand-held Detec DH-50A has been designed primarily for the purpose of body scanning to detect concealed metal objects - in particular offensive weapons or pilfered articles.

Typically the unit is used in conjunction with a walkthrough metal detector.

With the Detec DH-50A the search can be conducted without physical contact with the person being scanned.

The detector is switched on by a single press-button. When metal is detected, the unit gives an audible and visual alarm.

Low battery condition is indicated by a continuous alarm when switched on.

- High sensitivity: detects ferrous and non-ferrous materials.
- Lightweight, well balanced, functional design.
- Simple to operate, tough and reliable.
- All solid state electronics for accurate detection.
- Automatic retuning. No tuning or adjustment required.
- Audible and LED visual alarm.
- Tough, impact resistant housing.
- Extended search call for quick and reliable scanning of large search area.
- Low power requirement. Automatic battery check.
- Does not affect heart pacemakers or magnetic tape.
- Fitted with convenient wrist strap
- Manufactured to NILECJ International Standard.
