

# AM Ultra Width Detection Range EAS System

## EAS Retail Store 58khz AM Clothing Shop Alarm Anti-theft System Gate

### Characteristic

- Superior ABS material, elegant and transparent
- Single, double and multi antennas for the option
- Easy to tune without external controller
- Resistance to same frequency interference
- Ports to monitor hard disk recorders

This AM system works on the principle that a transmitter sends out a signal in bursts which energise tags within the pedestal zone. When the pulse ends, the tag responds. Between bursts, the tag's signal is detected by a receiver. Therefore, if an active tag passes between the pedestals, an alarm will sound.

#### Item specifics

Brand Name: ETAGTRON

Model Number: PT309

Type: EAS AM system

Dimension: 1500\*340\*20MM

Detection Range: 0.6-2.5m

Work Model: Master + Slave

Color: white / black / grey

Working Voltage: 110~230V 50~60HZ

Input: 24V

PT309

### Detection range

Remarks: The detection range is the figures generated by the system in normal operation environment by using Etagtron label and tag for reference only.

Color: Black ■ White ■ Grey ■
